About Carbon Compass

Your Strategic Guide to Navigating CBAM

Carbon Compass is an intelligent tool designed to help businesses like yours navigate the complexities of the EU's Carbon Border Adjustment Mechanism (CBAM) with clarity and confidence.

Its primary function is to analyze your shipping documents or manually entered data to determine if your products fall under CBAM regulations. This crucial first step removes the guesswork from compliance.

Once a product is identified as CBAM-relevant, the system provides a transparent estimate of the potential fee. The calculation is based on the specific product category, its associated embedded emissions, and illustrative EU Allowance (EUA) prices, giving you a clear financial forecast for your imports.

From Calculation to Strategy

Beyond just calculation, Carbon Compass acts as your strategic advisor. It generates practical, AI-powered suggestions to help you reduce these costs. Recommendations may include sourcing from lower-emission producers, verifying supplier data, or exploring alternative materials—turning regulatory challenges into opportunities for sustainable improvement.

Designed for logistics managers, importers, and trade compliance professionals, this tool translates complex regulations into actionable business intelligence.

Upload your document or enter your shipment details to begin your CBAM evaluation.
